

Equivalent Measures

10 mm = 1 cm
 100 cm = 1 m
 1,000m = 1 km

Vocabulary

centimetre cm	A measure of length (approximately the width of a fingernail)
metre m	A measure of length (a guitar is approximately 1m in length)
millimetre mm	A measure of length (approximately the thickness of a piece of card)
kilometre km	A large measure of length – used to measure distances between places
length	How long, how tall or how far apart things are
width	The distance from side to side
distance	A measure of how far objects are apart
perimeter	The distance around a 2D shape
right angle	An angle equal to 90°
rectilinear	A 2D shape whose sides all meet at right angles

Perimeter

Rectilinear Shapes

Perimeter of a rectangle = length + width + length + width

Find the total of all of the sides using addition
